

SQL Injection Attack on DVWA (Low Security)

Objective

Demonstrate SQL Injection vulnerability using DVWA.

Tools Used

DVWA, XAMPP/LAMP, curl, Browser

Vulnerability

The application fails to sanitize user input before using it in SQL queries.

Payload Used

1' OR '1'='1

Impact

Authentication bypass, database information disclosure, unauthorized access.

Mitigation

Prepared statements, parameterized queries, input validation, least privilege access.

Attack Demonstration Steps

- Install and configure DVWA.
- Set DVWA security level to LOW.
- Navigate to SQL Injection module.
- Enter payload: 1' OR '1'='1
- Observe database records returned.
- Explain the vulnerability and prevention methods.
